Time clock adjustment for filter pump

Letts filter pump control panels are equipped with a 24-hour timer. When the pump switch on the panel is set to Auto, the pump will be switched on and off according to the timer. With the switch in the Manual position, the pump will run continuously.

Time adjustment

To adjust 24-hour outer dial, rotate the clock's minute hand clockwise until the correct time is indicated by the pointer.

To adjust the clock hands if they disagree with the 24-hour dial, hold the outer dial still whilst pushing the minute hand around clockwise.

Setting on-off periods

The outer dial is surrounded by small tabs, each representing 10 minutes duration. These can be clicked outwards to select an ON period. When pushed in towards the dial centre, an OFF period is selected. In the photograph above, the timer has an on period between 7.00am and 6.00pm

These instructions are a guidance only when addressing specific problem(s) with your pool. Without knowledge of all the variables in a given situation we cannot take responsibility for any damage that may be caused by non-Letts personnel when carrying out these tasks.
